Blacktech Solutions Corp
Last Updated: June 2026

Quick Reference

Action	Where
Watch videos	tv.blacktechsolutionscorp.com
Admin panel	Login → Administration
Upload video	+ Publish → Add a video
Create channel	My library → + Add channel
Add users	Administration → Users
Change branding	Administration → Configuration
Change avatar/banner	API (see below)
Federation	Administration → Configuration → Federation

Login Credentials

URL

https://tv.blacktechsolutionscorp.com

Username

root

Password

BlacktechTV2026!

Docker Compose Path

/home/allenai/peertube/

Upload a Video (Web UI)

Go to tv.blacktechsolutionscorp.com and **Login**

Click **+ Publish** (top menu) → **Add a video**

Drag/drop or click to select your video file

Fill in:

- **Title** — name of the video
- **Channel** — pick root_channel (default) or create new ones
- **Privacy** — Public, Unlisted, or Private
- **Category** — Science & Technology (15)
- **Description** — SEO text, links, hashtags

Click **Publish** — PeerTube auto-transcodes to multiple resolutions

Upload a Video (API)

```
# Step 1: Get auth token
cd /home/allenai/peertube
docker compose exec -T peertube curl -s -X POST \
  'http://localhost:9000/api/v1/users/token' \
  -d 'client_id=dmy7ml8bmyc2pind0uam8m2kf2r6stv6&client_secret=NIoaI3NU9YZ2f25SPjnJrelv5bXq3f0Y&grant_type=password&response_type=code&username=root&password=BlacktechTV2026!' \
  | python3 -c "import sys,json; open('/tmp/pt_token.txt','w').write(json.load(sys.stdin)['access_token'])"

# Step 2: Copy video to container
docker cp /path/to/video.mp4 peertube:/tmp/upload.mp4

# Step 3: Upload
```

```
TOKEN=$(cat /tmp/pt_token.txt)
docker compose exec -T peertube curl -s -X POST \
  http://localhost:9000/api/v1/videos/upload \
  -H "Authorization: Bearer $TOKEN" \
  -F "videofile=@/tmp/upload.mp4;type=video/mp4" \
  -F "channelId=1" \
  -F "name=Video Title" \
  -F "privacy=1"
```

🔧 Create a Channel

Login → click your avatar (top right) → **My library**

Click **+** **Add channel**

Name it (e.g., energy-tips, electrical-work, behind-the-scenes)

Each channel gets its own URL: tv.blacktechsolutionscorp.com/video-channels/YOUR_CHANNEL

👤 Create Additional Users

Login as admin → **Administration** → **Users** → **+** **Add user**

Set username, email, password, role (User, Moderator, Admin)

Use for team members, content creators, etc.

🖼️ Upload Avatar / Banner (API)

⚠️ Use POST (not PUT) to the /pick endpoints. Field names are avatarfile and bannerfile.

```
# Get token (see above), then use Python http.client inside container
# POST /api/v1/config/instance-avatar/pick → field: avatarfile
# POST /api/v1/config/instance-banner/pick → field: bannerfile
# Token must be read from file (shell interpolation truncates it)
```

🌐 Federation (Follow Other Instances)

Admin → **Configuration** → **Federation**

Add follows: videos.danksquad.org, tube.tchncs.de, peertube.social

Your videos also appear in their feeds = more reach

📺 Embed Videos Anywhere

Every video has an **Embed** tab — click **Share** → **Embed** — paste the iframe into:

- Blacktech website
- Social media posts
- Email newsletters
- Proposals and estimates

📺 Live Streaming

Admin → **Configuration** → **Live streams** → Enable

Create a live video → get RTMP push URL

Stream from OBS, phone, or any RTMP source

⚙️ Maintenance Commands

```
# Restart PeerTube
```

```
cd /home/allenai/peertube && docker compose restart peertube

# Check status
docker compose ps

# View logs
docker compose logs peertube --tail 50

# Reset admin password
docker compose exec peertube node dist/scripts/reset-password.js -u root
# Then type new password

# Update PeerTube
docker compose pull && docker compose up -d

# Change instance description
docker cp /path/to/local-production.json peertube:/config/local-production.json
docker restart peertube
```

⚙️ OAuth Credentials (API)

Client ID

dmy7ml8bmyc2pind0uam8m2kf2r6stv6

Client Secret

Nloal3NU9YZ2f25SPjnJrelv5bXq3fOY
