

Outdoor Lighting Upgrades for Commercial and Industrial Facilities

Achieve up to **50%** energy savings by pairing **LED lighting projects with networked lighting controls**.*

Is an Outdoor Lighting Project Right for You?

- Does your facility's outdoor or garage lighting system use fluorescent or LED fixtures that are consuming lots of energy and driving up your electric bill?**
- Are the outdoor lights too dim or too bright in some areas?
- Are outdoor fixtures left on unnecessarily, either when there is sufficient daylight or no users?

ComEd has incentives available to help customers optimize their facility's outdoor and garage lighting. **Scan the code below** to see how you can save money and energy.

Benefits

You can lower energy costs and consumption by improving the performance of your outdoor lighting system. An authorized Energy Efficiency Service Provider will assist you every step of the way to help your facility optimize its energy use.

Consider these energy-efficiency opportunities:

- **LED Fixtures and Retrofits:** Save energy and earn incentives by upgrading outdoor fluorescent fixtures to high-efficiency LED ones. New in 2026, lighting redesign projects, i.e. not 1:1 replacements, can earn a higher incentive at \$0.80 per watt saved! Instant Discounts also available on DLC listed fixtures
- **Networked Lighting Control (NLC) System:** Fixtures that will operate 2,000+ hours a year can further save energy and optimize fixture controls by utilizing an NLC with strategies to minimize unnecessary illumination, such as astronomical scheduling or daylight harvesting
- **Non-Networked Lighting Controls:** Outdoor lighting systems not operated for 2,000+ hours a year can still greatly benefit from non-networked lighting controls, such as photocells or scheduling based on sunrise and sunset
